

DAY 17

Save for later

Plan Your Data Story with AI

How to walk into any data presentation already prepared

Hi, I'm Kainat!

Today we learn how to build a data story AI actually helps you defend.

Pick Metrics

Prep Questions

Pull Data

Used by 500+ students

What even IS a measurement plan?

Think of it like a short briefing you give yourself before walking into the room.

It is just a clear answer to three things: what matters, what they will ask, and where the numbers live.

1

You tell AI your goal and the kind of meeting you are walking into

2

AI suggests the metrics that actually connect to that goal

3

You pick one and ask AI what tricky questions might come up

4

AI points you toward where that data usually lives

5 minutes

is roughly all it takes to walk in with a clear metrics plan instead of a guess

Most people open the dashboard first **and panic about what to show.**

When you ask AI first, **you walk in already knowing your story and your numbers.**

That gap is what separates a confident presenter from a nervous one.

Before AI vs After AI

What you do	Before AI	After AI
Choosing metrics	Guess what leadership wants	Get a focused shortlist in seconds
Facing questions	Get caught off guard mid-meeting	Walk in with answers ready
Finding the data	Dig through menus alone	Get exact export steps
Overall feeling	Anxious and reactive	Calm and prepared

Which column feels like your last data meeting?

Find Your Top Metrics

Before opening any dashboard, hand AI your context first.

This single prompt turns a blank page into a focused shortlist.

COPY-PASTE PROMPT

```
I work in [your field]. I'm preparing for [type of meeting]. Our goal is to [your real goal, e.g. grow event signups]. What are the top 5 metrics I should focus on, and why does each one matter?
```

Best tools for this step:

ChatGPT

Claude

Gemini

Save the metric you like most. You will use it in Step 2.

Prep for the Tough Questions

Now stress test your metric before anyone else does.

Stay in the same chat so AI remembers your goal and your metric.

COPY-PASTE PROMPT

```
What tough questions might leadership ask about  
[the metric you chose]? Include at least one question  
that challenges whether this metric matters at all.
```

- 1 Read every question slowly
- 2 Note the one you can't answer yet
- 3 That gap is exactly what to prep

Better to feel awkward in a chat than in front of leadership.

Know where to look but not how to get it out? Ask before you waste time clicking around.

COPY-PASTE PROMPT

```
How do I export [the data you need] from  
[where it lives, e.g. your form tool or  
analytics dashboard] so I can open it in  
[destination, e.g. a spreadsheet]?
```

Best tools for this step:

ChatGPT great at clear step-by-step exports

Claude strong with longer, messier data sets

Gemini fits naturally if you live in Google tools

Now you have metrics, answers, and the data. That is a full plan.

Generic Chat vs Guided Chat

Without a plan

- Scrolling the whole dashboard
- Surprised by leadership questions
- Exporting random columns
- Walking in anxious

With a plan

- Opening with 5 metrics that matter
- Ready with answers in advance
- Exporting exactly what is needed
- Walking in calm and clear

Same data. Same dashboard. Completely different meeting.

Pick the Right AI for the Job

ChatGPT

Best for fast, structured breakdowns of metrics and clean step-by-step exports.

Best for: quick prep before a meeting

Claude

Best for working through long, messy data and writing out a full measurement plan.

Best for: detailed reports and documents

Gemini

Best for staying inside Google tools like Sheets, Docs, and Analytics.

Best for: students already living in Google Workspace

Perplexity

Best for quickly checking what metrics other teams or industries usually track.

Best for: research before you even start

SAVE THIS

Your 3-Step Cheat Sheet

1

Find the metrics

Tell AI your goal and meeting type, ask for the top 5 metrics and why

2

Prep the questions

Ask what tough questions leadership might raise about your pick

3

Pull the data

Ask exactly how to export it from wherever it currently lives

Pro tip: keep the same chat open through all 3 steps so AI remembers your context.

LAB TIME! Plan a Real Update

- 1 Open your favorite AI tool and start a fresh chat
- 2 Tell it your real goal and what kind of update you are preparing
- 3 Ask for the top 5 metrics worth presenting and why
- 4 Pick one metric and ask what tough questions might come up
- 5 Ask how to export that data from wherever it actually lives
- 6 Save the whole chat. That is now your measurement plan

Share which metric you picked in the comments!

One Question For You

Which step do you usually skip before a presentation?

A Picking the right metrics

B Preparing for tough questions

C Actually pulling the data

Comment A, B, or C below!
