Save for later

How to Turn Messy Data Into Insights

Use AI to read images and build a smart spreadsheet for you

Hi, I'm Kainat!

Today we learn how to turn any messy screenshot into a clean, **analyzed spreadsheet**.

Extract Data

Auto Analyze

Save Hours

Used by 500+ students

Swipe to learn all 3 steps · Scroll through all 12 slides!

What Is Multimodal AI?

Think of it like a reader that never gets tired.

You show AI a picture and it reads, sorts, and organizes everything inside it.

- 1 You upload any image, screenshot, or scanned page**
- 2 AI reads the text and pulls out the exact details you need**
- 3 It arranges everything into neat rows and columns**
- 4 You ask it questions in plain English and get instant analysis**

No coding or formulas needed to get started!

Zero

formulas needed to analyze your data

Most people copy data by hand into sheets.

AI reads the image and builds the table for you.

You stop wrestling with VLOOKUP and IF statements.

You start typing what you want in plain words.

That is hours of manual entry turned into minutes.

Before AI vs After AI

What you need	Without AI	With AI
Reading a screenshot	Type it out by hand	AI extracts it in seconds
Sorting reviews	Read every single one	AI tags sentiment for you
Writing formulas	Search Google for syntax	AI writes it from your words
Spotting patterns	Scroll and guess	AI summarizes the trend

Which column are you living in right now?

Upload any screenshot, then tell AI exactly what to pull out.

This table becomes the base of your spreadsheet.

COPY-PASTE PROMPT

```
Extract the [data you want, e.g. reviews]  
from this [source, e.g. screenshot] and  
turn them into a [format, e.g. table]  
with these columns: [column names,  
e.g. date, text, number of stars].
```

Best tools for this step:

Gemini

ChatGPT

Claude

Export the result straight into a spreadsheet!

Open your exported sheet and add one new column for analysis.

1**Open the new sheet**

Check that every row and column landed correctly

2**Add a new column**

Give it a clear name like "sentiment" or "category"

3**Click into the first cell**

This is where your plain English formula goes

4**Keep the original data untouched**

Your new column builds on top of it, nothing gets lost

Your data is now organized and ready to think with you!

Type your request into the AI formula cell, no syntax needed:

COPY-PASTE FORMULA

```
=AI("Analyze the [data to classify,  
e.g. customer feedback] and sort it  
into [your categories, e.g. Positive,  
Neutral, or Negative]", [cell with  
your text, e.g. B2])
```

Drag to fill

Apply it to every row

Add more columns

Repeat for new questions

Adjust anytime

Edit the prompt, not formulas

One sheet now answers questions for you automatically.

Manual Entry vs AI Sheet

Without AI

- Copy data by hand
- Hours of typing
- Easy to miss rows
- Stuck on formulas
- No real analysis

VS

With AI

- Reads the image for you
- Done in minutes
- Catches every detail
- Plain English formulas
- Instant insights

Works on: Google Sheets | Excel with Copilot | Notion AI

Same messy data, completely different outcome.

Ideas for Every Student

Survey Results

Turn screenshots of survey responses into a sorted table

Best for: research and social science students

Class Notes

Extract key terms from photographed lecture slides

Best for: all students

Budget Tracking

Pull totals from receipt photos into a spending sheet

Best for: business and finance students

Product Reviews

Sort customer feedback screenshots by sentiment

Best for: marketing and UX students

1

Extract the Data

Upload an image and ask AI to turn it into a table

2

Export to a Sheet

Send the table straight into your spreadsheet

3

Ask in Plain English

Type what you want to know, skip the formulas

Pro tip: build one template and reuse it every time!

LAB TIME! Try It Yourself

- 1 Find any screenshot with data, like reviews or a receipt
- 2 Upload it to your AI tool of choice and ask for a table
- 3 Export the result into a spreadsheet
- 4 Add one new column for analysis
- 5 Type your request in plain English using the AI formula
- 6 Drag the formula down to fill every row

Share what data you organized in the comments!

One Question For You

What messy data would you love to organize with AI?

A Customer reviews or feedback

B Receipts and expenses

C Class notes and study material

Comment A, B, or C below!
