

How To Make AI Summarize **Anything** You Give It

Plus the simple trick behind long context windows, explained without the tech jargon.

Hi, I'm Kainat!

Today we're learning how to get sharp, accurate AI summaries every single time.

Task

Context

Iterate

THE CONCEPT

AI Can Turn Any Long Text Into a Short, Clear Summary

Gen AI tools are built to spot patterns in text. Give one a messy report or a long email thread, and it can **compress it down** to exactly what matters.

Think of an email thread with 40 replies. Instead of scrolling for ten minutes, **you get the key points in ten seconds.**

GOOD TO KNOW

Tokens Are the Bricks AI Uses to Build Its Answer

1M+

tokens some AI models can read at once today

Every prompt gets broken into tokens first. The longer your text, the more bricks AI needs to process it, and newer models can now handle way more bricks at once.

Weak Prompt vs Strong Prompt

What You Need	Weak Prompt	Strong Prompt
Length	"Summarize this"	"In 5 bullet points"
Tone	Left to guesswork	"Simple, 9th grade level"
Focus	Summarizes everything	"Focus on the budget part"
Accuracy	No way to check it	You review and refine it

One tiny detail changes the whole output.

1

Start With a Crystal Clear Task

Tell the AI exactly **what** to summarize, in **what format**, at **what length**, and for **what reading level**.

COPY THIS PROMPT

```
"Summarize the attached report in 5 bullet points, at a 9th grade reading level, focused only on the key financial risks."
```

Vague requests get vague summaries. **Specific asks get useful ones.**

2

Add Context and a Reference Example

Explain **why** you need the summary, and if you have a past summary you loved, share it as a style guide.

COPY THIS PROMPT

```
"This summary is for my manager before a budget meeting. Here is a summary I liked before, match that same style and tone."
```

Context anchors the AI. **It's the difference between a guess and a genuinely useful answer.**

3

Check the Output, Then Ask Again

Read the summary against the original. Missing something? Wrong tone? Just **ask the AI to fix it**, don't start over.

COPY THIS PROMPT

```
"This is too long and missed the deadline mentioned on page 3. Shorten it to 3 bullets and include that detail."
```

Big documents mean more room for mistakes. **Always double check before you send it anywhere.**

Short Context vs Long Context

Short Window

-  You break docs into chunks
-  Loses earlier details fast
-  You repeat yourself often

Long Window

-  Reads full reports at once
-  Remembers earlier details
-  Gives more personalized output

 **Good to know: this memory only lasts within the same chat. Close it, and you'll need to share your document again.**

Which AI Tool Should You Use?

ChatGPT

Great for **quick brainstorming** and drafting a first summary fast.

Claude

Best for **very long documents**, thanks to its huge context window.

Gemini

Handy when your document lives in **Google Docs or Drive** already.

Perplexity

Good for summarizing **research with live sources** attached.

Try a couple and see which output actually fits your task.

SAVE THIS

Your Summarization Cheat Sheet

1

Set the Task

Format, length, tone, and reading level, all in one prompt.

2

Add Context

Say why you need it and share a reference example if you have one.

3

Evaluate the Output

Cross-check it against the original before you trust it.

4

Iterate Until It Fits

Ask for changes instead of starting a whole new prompt.

Pro tip: with a long context window, you can paste the entire document, no chunking needed.

Lab Time! Summarize Your Own Document

- 1 Open any AI tool and start a new chat
- 2 Paste or upload a document you actually need summarized
- 3 Use the copy-paste prompt below
- 4 Check the summary against the original
- 5 Ask it to adjust the length or tone if needed

COPY THIS PROMPT

```
"Summarize this document in [X] bullet points, at a [reading level], focused on [topic]. This is for [purpose]."
```

Share your summary result in the comments!

One Question For You

What do you summarize with AI the most?

A Long emails and messages

B Research papers or reports

C Lecture notes or textbooks
