Template Inside

How To Make AI Write Your Prompts

Turn any AI tool into your own personal prompt designer

Hi, I'm Kainat!

Today we stop guessing prompts and let **AI** design them for you.

Generate Prompts

Refine Prompts

Used by 500+ students

Swipe to learn 5 strategies. Scroll through all 12 slides!

Wait, What Is Meta-Prompting?

It is simple. Instead of guessing the right prompt, you ask AI to write or fix it for you.

- 1 You tell AI the result you're going for
- 2 AI writes or improves the prompt for you
- 3 You use that prompt to get better output
- 4 You repeat until the result feels right

No prompt writing skills needed. AI does the heavy lifting.

Two Ways to Use Meta-Prompting

Meta-prompting has two jobs it can do for you.

STARTING FRESH

Prompt Generation

Build a brand new prompt from scratch, based only on the goal you describe.

IMPROVING WHAT YOU HAVE

Prompt Refinement

Take a prompt you already wrote and ask AI to make it clearer, sharper or more engaging.

Most people only use half of this trick. You're about to use both.

Here's the Lightbulb Moment

**Half the struggle with AI isn't the tool.
It's knowing **what to ask it.****

Meta-prompting flips the problem. You stop guessing and start asking AI to guess for you.

Save this slide. You'll want to remember it.

Before Meta-Prompting vs After

What you need	Without It	With It
Writing a prompt	You guess and hope	AI builds it with you
Fixing weak output	You rewrite from scratch	You ask AI how to fix it
Matching a tone	Trial and error	AI rewrites the mood fast
Combining ideas	You merge prompts by hand	AI merges them into one

Which column have you been living in?

Tell AI what you're trying to achieve. Let it design the full prompt for you.

This is called direct generation, the fastest way to start.

COPY-PASTE PROMPT

Generate a prompt that could help me
[describe your goal here].

Example: "Generate a prompt that could
help me write a job offer letter for
a new hire."

Good tools for this step:

ChatGPT

Claude

Gemini

Perplexity

Copy the result. That's your first working prompt.

Give AI Something to Work From

Paste in an image or some text, then ask AI to build a prompt around it.

Perfect for when words alone can't describe what you want.

COPY-PASTE PROMPT

```
Using the attached [image or text],  
generate a prompt I can use to  
[your goal].
```

```
Example: "Using this manual, generate  
a prompt that explains its most  
important concepts."
```

Good tools for this step:

Claude

ChatGPT

Gemini

This works great when a picture or a page says more than words.

Make Your Prompt Even Better

Already have a prompt? Ask AI to level it up or shift its tone.

This is prompt refinement, and it's where good prompts become great ones.

COPY-PASTE PROMPT

```
How can I change this prompt to make  
the result more [engaging, emotional,  
detailed]?
```

```
Here is my prompt: [paste your  
prompt here]
```

Good tools for this step:

ChatGPT

Claude

Gemini

This is how average prompts turn into great ones.

Which AI Tool Should You Use?

Different AI tools are good at different meta-prompting jobs. Try a few and see what fits your task.

Research or fact-heavy prompts: tools with strong web search and current answers work well

Brainstorming or creative prompts: tools known for natural, expressive writing shine here

Long documents or manuals: tools with bigger context windows handle these best

Everyday quick prompts: any major AI chat tool you already use works just fine

There's no single best tool, only the best tool for the task in front of you.

Your Meta-Prompting Cheat Sheet

- 1 Direct generation: ask AI to write the prompt**
- 2 Template request: ask AI for an outline first**
- 3 Reference based: use an image or text as your base**
- 4 Chaining: break one big prompt into smaller steps**
- 5 Refinement: level up, remix, or swap the style**

Save this slide so you never forget a strategy.

LAB TIME! Build Your First Meta-Prompt

1

Open any AI chat tool you already use

2

Think of one task you always struggle to prompt for

3

Type: "Generate a prompt that could help me [your goal]"

4

Copy the prompt AI gives you back

5

Paste it in and ask your real question

6

Compare it to how you would have prompted before

Comment DONE once you've tried it.

One Question For You

Which meta-prompting strategy will you try first?

A Direct generation, just ask AI to write it

B Reference based, using an image or text

C Refinement, leveling up a prompt you already have

Comment A, B, or C below!
