

DAY 02

Prompting Tips & Tricks

Get the BEST out of any AI tool

Insights from a Top 1% Engineering Student

AI Simplified Series

Hi, I'm Kainat!

Today we learn...

The Golden Rule of Prompting

Always follow the 3 C's

A diagram illustrating the 'Golden Rule of Prompting' through three colored circles connected by a dashed line. The first circle is purple and contains a white 'C'. The second circle is pink and contains a white 'C'. The third circle is teal and contains a white 'C'. Below each circle is a bold title and a descriptive sentence.

C

Concise

Keep prompts
short & simple

C

Clear

Be precise,
avoid vague words

C

Consistent

Use same words
throughout chat

Be Concise

Short prompts = faster, better answers

1

Why it matters:

A prompt that is short and to the point gives AI a clear job. Long, tangled prompts confuse it and waste time.

BAD PROMPT

"Can you please help me write something maybe like an email or a message about our product that sounds good?"

GOOD PROMPT

"Write a 3-line email promoting our new skincare product."

Tip: One clear request at a time!

Be Clear

Vague in = vague out

2

Think of it like ordering food:

"Make this better" = like saying "Cook something nice"

The chef has NO idea what you actually want!

Always tell AI exactly what better looks like.

VAGUE

"Make this better."

CLEAR

"Rewrite in a friendly tone. Use short sentences."

Avoid: contradictions, guesses, or vague adjectives

Be Consistent

Use the same words throughout your chat

3

Real life example:

You say "spreadsheet" at the start. Then you say "matrix" and "sheet" later. The AI gets confused about what you mean!

Stick to one word for one thing.

Prompt 1
"spreadsheet"

Prompt 2
"spreadsheet"

Prompt 3
"spreadsheet"

AI relies on your word choices to stay on track!

Always Evaluate the Output

Don't trust blindly. Read it. Check it.

Accuracy

Is it factually correct?

Bias

Does it favor one side unfairly?

Relevancy

Does it answer your actual question?

Consistency

Is the tone & quality the same?

AI can be wrong. You are the final check.

Improve Through Iteration

First answer is NOT the final answer

Revisit the framework

Add more persona, task, or context

Break it up

Ask one small piece at a time

Add constraints

Give specific requirements to narrow focus

Two Power Moves

Use References

Give AI examples of what you want it to produce.

Example: Attach a blog post and say "Write in this style"

Works with:
text, images, audio,
video (depends on AI tool)

Always explain HOW
the reference relates
to your task!

New Chat = New Topic

AI remembers the whole conversation (context window).

If you switch topics in the same chat, old info can mess things up.

Always start a fresh chat when you move to a new task!

Keep it focused.

Fresh topic = fresh chat. Always.

Build a Prompt Library

Why it matters:

Prompting gets better with practice. When you find a prompt that works really well, save it! You won't have to start from scratch next time.

1

Try different prompts

2

Note which ones
work best

3

Save them in a doc
or note

4

Reuse and tweak as
needed

Your prompt library = your AI superpower

Quick Recap

1

3 C's

Concise, Clear, Consistent

2

Evaluate

Check accuracy, bias, relevancy

3

Iterate

Refine and improve your prompts

4

References

Show examples of what you want

5

New Chats

New topic = new conversation

6

Prompt Library

Save your winning prompts

LAB TIME!

Your Mini Practice Task

Put today's tips into action right now

Open Gemini (or any AI tool)

- Step 1:** Write a BAD prompt (vague and long). Note what the AI gives you.
- Step 2:** Now rewrite it using the 3 C's. Compare the two answers.
- Step 3:** Try adding a reference: say "Write in the style of [example]"
- Step 4:** Evaluate: check for accuracy, bias, and relevancy
- Step 5:** Save the prompt that worked best in a Notes doc!

You got this!

Share your best prompt in the comments below.
Let's learn together!
