

DAY 03

Hi, I'm Kainat!
Today we level up...

Advanced Prompting Strategies

Power Phrases + Prompt Chaining
Insights from a Top 1% Engineering Student

AI Simplified Series

2 Techniques to Level Up

Building on top of the prompting framework you already know

1

Power Phrases

Level up a single prompt from inside.
Adds precision & smarter reasoning.

2

Prompt Chaining

Manage a full project across many prompts.
Output of one feeds the next.

Micro skill + Macro skill = You become unstoppable

Technique 1

Power Phrases

Specific words that guide HOW AI thinks

Think of it this way:

Regular prompt = tells AI WHAT to do

Power phrase = tells AI HOW to get there

Give a Process

"Think step-by-step"

Set Audience/Tone

"Write for executives"

Hard Constraints

"Do NOT mention X"

Ask for Critique

"Play devil's advocate"

Get Alternatives

"Give me 3 versions"

Expand Output

"Elaborate on point 2"

Power phrases = precision medicine for prompts

Power Phrase Cheat Sheet

Copy-paste these into your next prompt

Process	Think step-by-step.	AI breaks it into logical chunks
Audience	Write for [executives].	Tone matches your reader
Constraint	Do NOT mention [topic].	Keeps answer focused
Critique	Play devil's advocate.	Forces AI to find weak spots
Variants	Give me 3 versions.	More options to choose from
Expand	Elaborate on point 2.	Goes deeper where you need it

Combine phrases for even better results!

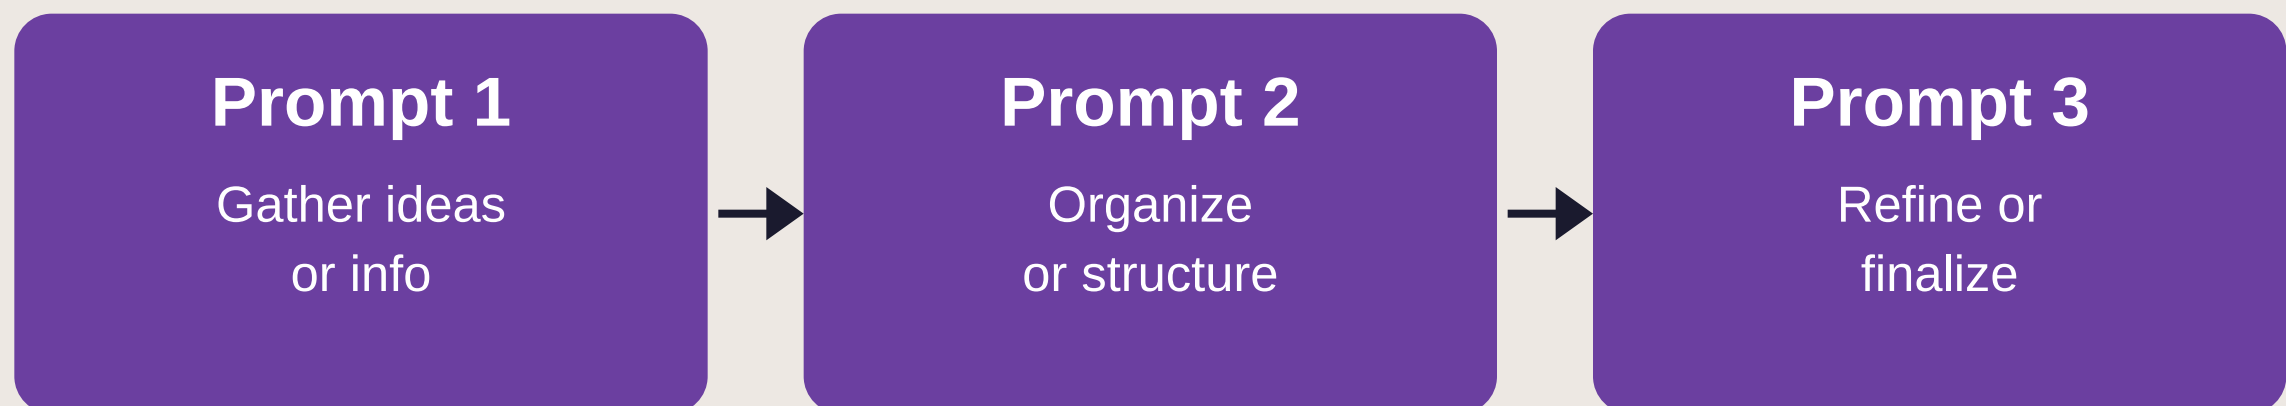

Technique 2

Prompt Chaining

Break big tasks into connected smaller steps

Factory Assembly Line Analogy:

Output of Prompt 1 --> Input of Prompt 2 --> Input of Prompt 3

One giant prompt

Overwhelms AI, vague output

Chained prompts

Clear, deep, structured output

Each prompt builds on the last. That's the magic.

Prompt Chaining in Action

Real Example: Planning a Paris Trip

P1

Prompt 1

I'm going to Paris for 3 days.

I like art, history & parks. Suggest places to visit.

⋮

P2

Prompt 2

Using those places,

create a day-by-day itinerary that minimizes travel time.

⋮

P3

Prompt 3

For each day,

suggest a few restaurants near the listed locations.

Result: A detailed Paris plan with restaurants. Built step by step!

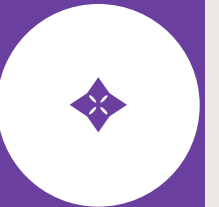

Why Chaining Works

3 big benefits you'll notice right away

Strategic Collaboration

AI stops being just a task-doer.

It becomes your thinking partner that critiques and refines.

Complex Problem Solving

Big projects feel manageable.

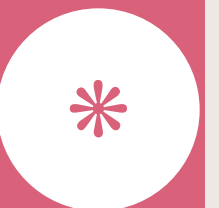

You break them into clear phases, one step at a time.

Stronger Outputs

Layering info = deeper results.

Each new prompt adds context the previous one lacked.

One prompt done well. Many prompts? Magic.

Try It In Your Own Work

Swap in your role and make the chain yours

Marketing

Prompt 1: Generate a campaign concept for [product]

Prompt 2: Create a 4-week launch timeline for it

Sales

Prompt 1: List 5 potential clients for [service]

Prompt 2: Draft a tailored outreach email for client #1

Operations

Prompt 1: Identify a bottleneck in [workflow]

Prompt 2: Give a step-by-step plan to fix it

Any Role

Prompt 1: Brainstorm ideas for [your goal]

Prompt 2: Pick the best idea and build a detailed plan

AI as a brainstorming partner, not just a task completer

Quick Recap

1

Power Phrases

Guide HOW AI reasons, not just what it does

2

Set Process

Use "Think step-by-step" to structure AI thinking

3

Audience & Tone

Always tell AI who it is writing for

4

Constraints

"Focus only on X. Do NOT mention Y."

5

Prompt Chaining

Break big tasks into connected smaller prompts

6

Build on Output

Use the answer from one prompt in the next

LAB TIME!

Your Mini Practice Task

Open any AI tool and do this right now

Step 1: Pick any task you're working on today.

Step 2: Write a single big prompt. Note the output.

Step 3: Break that prompt into 3 smaller chained prompts.

Step 4: Add a power phrase to at least one prompt.

Step 5: Compare both outputs. Which was better?

You got this! Share your best chain in the comments.

Let's learn together!
