

DAY 04

Hi, I'm Kainat!
Today we learn...

Responsible AI Use Best Practices

Use AI the smart, ethical way

Insights from a Top 1% Engineering Student

AI Simplified Series

What is Responsible AI?

AI is powerful. But it needs YOU to use it wisely.

AI has no real-world
context or common sense

You are responsible
for what AI produces

Always keep a human
in the loop

The big idea:

Responsible AI is not a checklist — it is about building the judgment to know **WHEN** to use AI, **HOW** to use it safely, and **WHEN** to step back and consult a real human.

Remember: YOU are the final decision-maker!

Privacy First

Protect Sensitive Info

Not everything should go into an AI prompt

NEVER DO THIS

"My client John Smith (SSN: 123-45) needs a contract for \$50k deal."

DO THIS INSTEAD

"A client needs a contract for a \$50k deal. Please draft it."

Use generic placeholders for names, places, and projects

Ask yourself: is this data someone expects me to keep private?

Paste only the relevant part, not the entire document

Clear AI memory between sensitive tasks to prevent bias

Compliance Matters

Know Your Limits

Some tasks have rules AI cannot replace

Health

Medical records, diagnoses, and treatment plans all have strict data handling rules.

Finance

Financial reporting and professional advice must come from licensed experts.

Legal

Legal documents need qualified review. AI cannot substitute a lawyer.

Ask yourself before using AI for regulated tasks:

Q: Does this task have regulatory requirements?

Finance, legal, and healthcare may have specific data handling rules.

Q: Are there licensing or credential requirements?

Some work must be done or verified by a licensed professional.

Q: Who is responsible for the output?

YOU are. Always have the proper oversight in place.

When in doubt, consult a real expert first!

Be Accountable

Build Accountability

Show your work. Own your process.

1

Track Sources

Know what came from AI vs.
your own work

->

2

Make it Auditable

Walk anyone through how you
used AI

->

3

Document It

Note how you checked and
validated AI output

Real example:

You use AI to draft a research report. Instead of just submitting it, you:

Write a note: 'AI-drafted, edited and verified by me'

Fact-check all stats and dates before submitting

Keep a copy of the original AI output for reference

Professional integrity = knowing how you got there

A

C

T

The ACT Checklist — your AI responsibility cheat sheet

A — Ask Yourself First

- **Is AI right for this task?**
No medical, legal, or financial advice from AI. Always consult a human professional.
- **Is this data safe to use?**
Never paste confidential, personal, or proprietary data into a public tool.
- **Am I following the rules?**
Check your employer's AI policy. Use only approved tools.

C — Check Before You Use

Verify accuracy, check for bias, assess tone, and add your own originality.

Full breakdown on the next slide!

Swipe to see it!

T — Tell People You Used AI

Be transparent about where AI helped and always stay compliant with your org's rules.

Covered two slides ahead!

Keep swiping!

ACT every single time you use AI!

Check Before You Use

Don't trust blindly. Read it. Verify it.

Accuracy

A

Verify every stat, name, date, and quote.
AI hallucinates confidently.

Bias

B

Does it unfairly favor one side? Always
read for hidden biases.

Appropriateness

A

Is the tone right for your audience? A
report is not a casual text.

Originality

O

Add your own expertise. Refine, do not just
copy-paste.

Quick self-check before hitting send:

- Did you fact-check all numbers and names?
- Does it sound balanced and not one-sided?
- Have you added your own insights and edits?

Iterate if output is not good enough!

Tell People You Used AI

Be Transparent

- Clearly say where and how AI helped
- Example: 'AI-drafted, reviewed & edited by me'
- Add a disclosure note in reports or posts

Be Compliant

- Follow your company's specific AI disclosure rules
- Never enter sensitive data in a public AI tool
- Use only tools approved by your organization

Real scenario:

You write a LinkedIn post with AI help.

Add at the bottom: "Written with AI assistance, edited by Kainat."

That one line protects your reputation and builds trust.

Simple. Honest. Professional.

Honesty about AI use builds lasting trust!

Quick Recap

1

Keep a Human in the Loop

AI has no judgment. You do. Always stay in control.

2

Protect Sensitive Info

Use placeholders. Share only what is needed.

3

Know Compliance Rules

Regulated fields still need qualified human professionals.

4

Build Accountability

Track, document, and verify every AI interaction.

5

A — Ask Yourself

Right task? Safe data? Approved tool?

6

C — Check Output

Accuracy, bias, tone, and originality every time.

T = Tell people when you use AI!

LAB TIME!

Your Mini Task

Put today's ACT framework into action

Open any AI tool you like

- Step 1:** Open Claude, Gemini, or ChatGPT — whichever you use.
- Step 2:** Before prompting, run the A check. Is the task safe? Is the data okay to share?
- Step 3:** Use the AI to generate output on any topic you like.
- Step 4:** Run the C check. Verify accuracy, look for bias, check the tone.
- Step 5:** Add a one-line AI disclosure at the end of your output.

You got this!

Share your mini experience in the comments.
Let's learn together!
