

DAY 05

Hi, I'm Kainat!

AI Agents

Your Smart Helpers

What they are, how they work,
& how to use them safely

Today we're learning about

AI Agents

AI Simplified Series • Swipe to learn →

WHAT IS AN AI AGENT?

Think of it like hiring a smart assistant

who can actually DO things for you, not just answer.

Regular Chatbot

You ask → It answers

One task at a time

No tools, no actions

Just text output

VS

AI Agent

You give goal → It acts!

Multi-step tasks

Uses real tools

Takes actions for you

Real Example:

You tell an agent: Organize my Q3 kickoff meeting

It checks calendars, finds free slots, sends invites. Done!

3 Real-Life Use Cases

Market Research

Scans competitors, reads reviews, and writes your weekly team update.

Sales & CRM

Checks your inbox, finds new leads, adds them to your CRM automatically.

Demand Forecasting

Reads sales data, predicts what you need, and orders supplies for you.

3 Core Parts Inside Every Agent

1 ■ Models

The brain. Trained on tons of data. It decides WHAT to do and HOW to use tools to reach your goal.

2 ■ Permissions

The guardrails. You decide what the agent can access. Like: only read unread emails, nothing else.

3 ■ Goals

The mission. You give a broad objective like Plan my team meeting and the agent figures out the steps.

THE AGENT LOOP

How an agent thinks step by step

Example: You say Organize the Q3 kickoff meeting

Checks calendar
for free time

Books the slot
for the team

Confirms everyone
is available

■ Loop continues until the goal is 100% complete!

Next loop after booking:

Analyze: Need to draft invites → Act: Write & send them

Observe: Everyone got it → Goal complete ■

Ask yourself 2 questions first

01 Risk — What if it goes wrong?

Low risk: Draft an internal memo ■

High risk: Make purchases for you ■■

The bigger the impact of a mistake, the more careful you should be.

02 Reversibility — Can you undo it?

Easy to undo: Save email to drafts ■

Hard to undo: Post on public social media ■

Irreversible actions need your eyes on them before they happen.

Golden Rule: High risk + Hard to undo = YOU stay in the loop!

Never fully hand over tasks that can cause big damage.

Human-in-the-Loop Approach

You are the boss. The agent works for you, not the other way around.

1

Set a clear goal

Plan a 5-city marketing tour for April

2

Agent starts working

Searches venues, checks budgets, drafts plan

3

YOU review & approve

You check the plan before anything is booked

YOU decide here

4

Agent continues

Books confirmed venues, sends confirmations

5

YOU review final output

You verify everything looks right

YOU decide here

4 Tips for Using Agents Right

Be specific with your goal

"Draft a 3-email sequence for our product launch" beats "Plan a campaign"

Grant only the permissions needed

If agent reads emails to find contacts, don't give it access to send emails too.

Always check the work yourself

You are responsible for the output. Especially on high-stakes tasks.

Refine and iterate

First result not great? Give more context. Treat the agent like a teammate.

QUICK RECAP

Everything in one slide!

1

AI Agents handle complex, multistep tasks for you

2

3 core parts: Model (brain), Permissions (rules), Goal (mission)

3

They work in a loop: Analyze > Act > Observe > repeat

4

Always check Risk + Reversibility before delegating

5

Stay in the loop for high-stakes, irreversible tasks

6

Start small with low-risk goals to build trust in agents

PRO TIP

Start Small!

Look for agentic features in tools you already use.
Give them a simple, low-risk goal first.

Agents are already around you:

Gmail

Smart Compose
auto-sort

Notion AI

Auto-fill
meeting notes

Salesforce

Lead scoring
CRM updates

Shopify

Inventory reorder
analytics

**Your success with AI agents depends on your clarity,
judgment, and vision. You are still the expert here.**

Your Mini Practice Task

Put today's learning into action right now

01

Find an agentic feature

In Gmail, Notion, or any tool you use, find ONE agentic feature you haven't tried yet.

02

Give it a low-risk goal

Write a simple, specific goal for it to complete. Like: Summarize my unread emails today.

03

Check the output

Did it do what you expected? What was surprising? What would you change?

04

Reflect on control

At what point would you have wanted to stop and check before it continued?

Share what you tried in the comments! Let's learn together
